INSIDE CONNECT for GOLD

Secure remote monitoring, configuration and troubleshooting

"INSIDE Connect gives us a much better overview of our buildings and makes everything more straightforward, without the need for unnecessary site visits. It saves us both time and money, while giving us better follow-up on system performance."

Swegon customer,
owner of residential buldings with multiple GOLD units now connected to INSIDE Con**nect.**

Benefits of INSIDE Connect

INSIDE Connect provides secure mobile-based remote access via router, which solves problems quickly and reduces the need for on-site visits.

FOR OPERATION AND SERVICE

- **Troubleshoot remotely**
  Secure remote access to the product. Quick troubleshooting and fewer site visits.
- **Remote support that solves more**
  Fast feedback and expert support from Swegon ensures the right spare part on the first visit.
- **Proactive and reliable daily operation**
  Use alarms and history to act earlier, plan maintenance and reduce unplanned stops.
- **Easy and secure user management**
  Central user management where permissions are added or removed immediately upon personnel changes.

FOR PROPERTY OWNERS

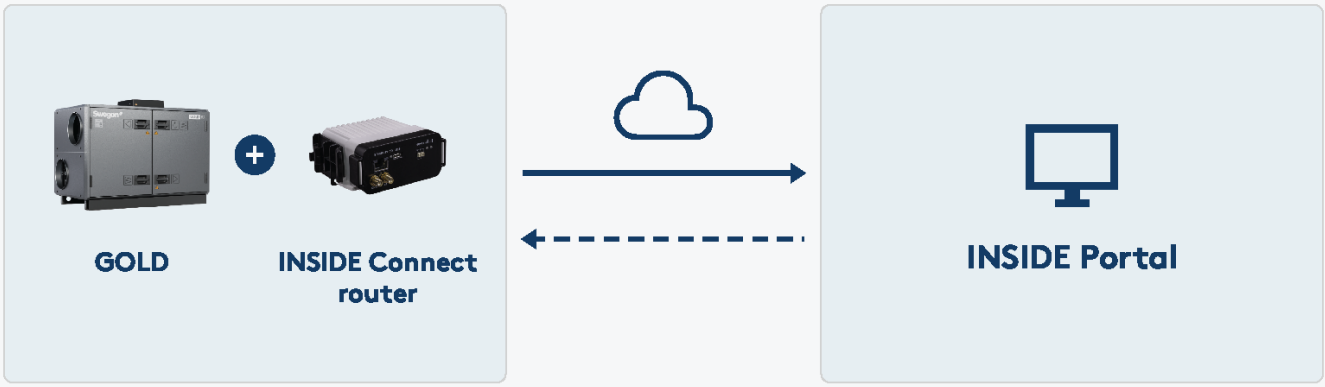

- **Overview of the entire portfolio**
  Bring together GOLD units, other products and multiple properties in the INSIDE Portal with transparent status and performance.
- **Lower life cycle cost**
  Reduce unnecessary visits, streamline the service organisation and let products last longer.
- **Energy monitoring**
  Compare operating costs and energy, get input for environmental certification and reporting
- **A digital foundation to build on**
  The connection opens up for more INSIDE services in line with needs.

Swegon

Secure remote access

INSIDE Connect uses a dedicated connection to the INSIDE Cloud and provides controlled access to GOLD units without the need for external users to access the building's internal network. All user management and access rights are managed centrally via the INSIDE Portal.

INSIDE Connect is CE marked and meets EU cybersecurity requirements, including RED and CRA.

Operational data – sent continuously from GOLD to INSIDE Portal

Remote access – initiated by the user in INSIDE Portal, opens the GOLD HMI/web interface

Simple and flexible solution

INSIDE connect is delivered as a complete kit (TBLZ198), making both ordering and installation easy. The kit includes a router, network cable and power cable, which are connected directly to the control board (IQlogic), so you don't have to order separate components.

The router is connected directly to the IQlogic control board using plug-and-play and is easily activated via the INSIDE Portal. No special knowledge is required and there is no need for a qualified electrician – a safe and smooth solution from delivery to commissioning.
