

**Suspended comfort
modules for cooling,
heating and ventilation**

PARASOL EX-FAMILY

Designed to be seen

Optimal room comfort

The PARASOL EX family's comfort modules belong to Swegon's range for suspended installation. The modules are designed to provide optimal room comfort.

The 4-way air distribution function, in combination with Swegon's ADC (Anti Draught Control), creates a maximized mixing zone and minimizes the risk of draught issues. The suspended comfort modules are designed for distributing air slightly upward. This gives the chilled air more space to mix with the room air before it reaches the occupied zone.

The easily adjustable nozzles in combination with Swegon's ADC (Anti Draught Control) offer maximum flexibility should the room layout need to be changed.

All the sides can be set independently of one another so that the comfort module can distribute more or less air and simultaneously discharge air in whatever direction desired in the room.

The modules are available in the following variants:

- Supply air
- Supply air and cooling
- Supply air, cooling and heating

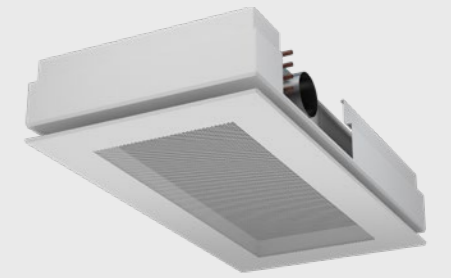

Three variants to cater for different requirements

PARASOL EX is based on our PARASOL Classic family and is equipped with nozzles that offer the option of asymmetric air flow. ADAPT Parasol EX and WISE Parasol EX have integrated dampers and nozzles.

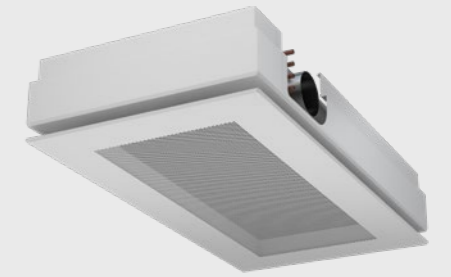

Depending on the application, you want in the property, there is a variant for all requirements. Without control, control with the possibility of stand-alone/connectable or as a product in a WISE system.

Irrespective of which variant you choose, the control equipment is always placed so that you can easily connect control, water and ventilation in the generous opening before fitting the cover plate or connection casing.

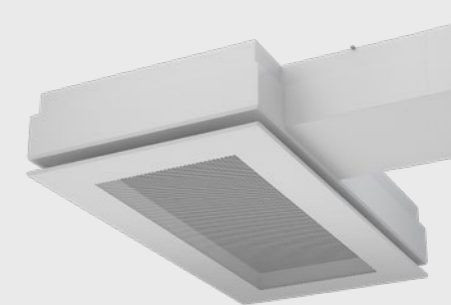

The design module is the same for all three of the products.

Standard product without cover plate.

Standard product with cover plate.

Standard product with mounted connection casing.

A complete WISE Parasol EX before the cover plate is attached to conceal the control equipment.

Supply air variant C

Some rooms require a great deal of air, for example conference rooms. Instead of supplementing the comfort modules in the room with diffusers, there is PARASOL EX-air variant C, a comfort module without a coil and with a supply air function only.

In addition to supplying a large quantity of air to the room, it also offers a stylish design, creating a uniform appearance as all the products look the same.

Naturally, air variant C is available in the same optional colours and perforation patterns as the other comfort modules.

Designed to be seen

The PARASOL EX variants not only deliver an excellent IEQ (Indoor Environmental Quality), they also bring a stylish design to be proud of.

Selectable water/air connection side

EX variants can now be ordered with water and air connections on side 2 or 4. The option to choose makes symmetrical installation possible.

Installation with connection side 2 for the products on the left-hand side and connection side 4 for the products on the right-hand side gives a symmetric installation

Installation where connection side 2 on all products has been chosen.

Design focus

Connection casing

There is a telescopic connection to conceal connecting ventilation and water pipes. An installation without a connection casing gives a more 'industrial feel' that fits well in modern new builds as well as in older premises.

Design cover

Smart design cover solutions provide effortless access for service, etc. and all control equipment is hidden inside the cover creating a calm and stylish appearance.

Uniform design

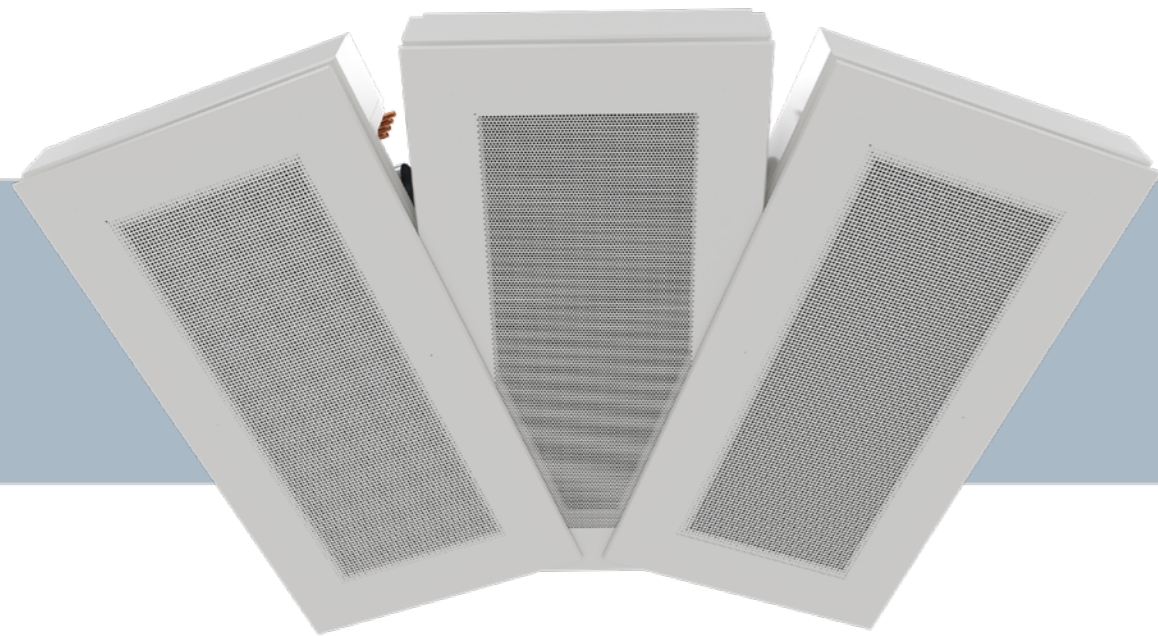

If there is a need of more air and at the same time, a desire to keep a uniform design in the room then PARASOL EX-air variant C (without heat exchanger) is the answer.

Flexible design

The PARASOLEX family consists of designed comfort modules perfectly suited for suspended installations without a suspended ceiling. There are numerous different colour options available as standard as well as different perforation patterns, which means they blend in well in many different environments. The timeless cover design means they fit both traditional office environments or in more industrial office styles.

Selectable perforation patterns

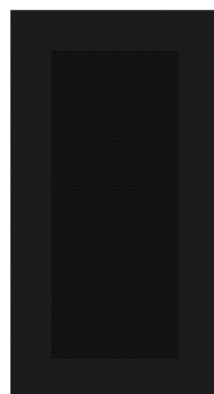

The product is available in 3 different perforation patterns.

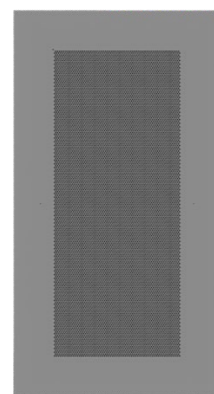

Optional colour

As standard the product is available in six different colours, but can also be ordered in most special colours.

A long-term partner

Local presence

Swegon has a network of qualified engineers and technicians near you. They carry out ventilation system commissioning, repairs and maintenance.

Our spare parts warehouse carries parts and accessories, including for older versions of our products.

Expertise

Swegon's technicians have solid expertise in ventilation, cooling and indoor climate systems. Swegon is committed to maintaining its industry lead, and attaches great importance to training and upskilling our technicians on the latest advances in the industry.

In this way, we always have the right resources and capabilities to assist you in achieving and maintaining dependable systems.

Operation & maintenance

Our comprehensive services comprise commissioning of diverse system solutions, together with trouble-shooting, repairs and maintenance services. We also offer monitoring of your facility, including software updating and fault prevention services.

Aftersales service

Swegon strives to assist its customers, wherever you are located, to identify the right solution for your premises. For refurbishment projects, we can help to propose the ideal solution for you in relation to space, operating costs and building use. Naturally, we can also assist you in both de-installation and installation of new products and solutions.

In the unlikely event that any product or service from us fails to perform as expected, you have the peace of mind of our product warranty.

Feel good **inside**
